# News - General Remarks

---

- Some functionality might have been changed or expanded over the years.
  - Recommendations might have changed.
- ➔ For each expert session an update with the most important changes is published.
- Check the additional remarks after having heard or read the expert session.
  - Feedback to the responsible author is welcome if you recognize outdated information within the session.

# Agenda

1. SAP Content Server 6.50: SAP MaxDB ODBC trace

2. Turn Off SAP MaxDB ODBC trace

# SAP Content Server 6.50: SAP MaxDB ODBC Trace

---

As of the version 6.50, the SAP Content Server always uses the ODBC driver version **>= 7.9**. In this ODBC version the special command line tool **odbc\_cons** is used on all operating systems.

The exact procedure of the ODBC trace producing is described in the SAP note **1428709 - Creating ODBC trace as of ODBC driver 7.7 and higher**

More information on the most actual state about the SAP MaxDB ODBC driver in the Content Server environment you will find in the SAP note **822239 - FAQ: SAP MaxDB interfaces** questions from 21st till 25th.

# Turn Off the SAP MaxDB ODBC Trace

---

If the SAP MaxDB ODBC Trace was turned on with setting the SAP Content Server parameter *SQLTrace* to value 1 in the configuration file *cs.conf* or *ContentServer.ini* please don't forget to turn off the ODBC trace through deleting the whole line with the parameter *SQLTrace* or just commenting out this parameter line with the preceding semicolon “;”.

The setting of this parameter to the value 0 will not deactivate the SAP MaxDB ODBC trace.

More information you will find in the SAP note **822239 - FAQ: SAP MaxDB interfaces** the 25th question.

# Thank you
